

The City investigated the colored water discovered in the creek in the Brittany Place subdivision. The fiber company working in the St. Charles County unincorporated subdivision Timberwood Trails, hit and ruptured a public water main belonging to MO-AWC. The ruptured water main gushed water out until it could be shut off and repaired. The gushing water and the dirt from the point of rupture ran under Highway N and into the creek along the rear of the Brittany Place subdivision. The waterline has been repaired and the runoff carrying the dirt has ceased. For more information call MO-AWC Customer Service at 1-866-430-0820.
